

## Instructions for RIT Dye

RIT will dye most washable fabrics. Will not dye 100% Acrylic or Polyester. Blends of Acrylic or Polyester will dye to a lighter shade.

One pack RIT Powder or half bottle RIT liquid will dye 500gms (1 lb) dry weight fabric. For strong colours (Black, Red, Navy etc) use double quantity of RIT.

Wash fabric before dyeing. Use RIT colour remover if fabric is stained, unevenly faded or if dyeing darker fabric to a lighter shade.

Place wet fabric in machine.

Dilute RIT with 500ml very hot tap water. Pour into drum with 1 tablespoon detergent.

Select wash temperature according to the care label of the garment or fabric you are dyeing.

For best results on cotton, acetate or linen add one cupful of salt diluted in 500ml very hot tap water after 10 minutes.

Extend wash cycle before rinsing to at least 30 minutes.

Rinse until water runs clear. Wash dyed items separately in cool water.

Clean machine by running hottest wash programme – use one cupful of bleach in this wash.
